EDUCATION

SRM University AP (SRMAP)

Bachelor of Technology in Computer Science and Engineering

Aug. 2023 – May 2027

Amaravati, AP

- **CGPA:** 7.2/10.0 (Till 5th Semester)
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Software Engineering, Web Technologies
- **Academic Focus:** Strong foundation in core computer science concepts and problem-solving techniques

EXPERIENCE

Full Stack Developer Intern

Jun 2025 – Aug 2025

Remote

- Developed **FitTrack**, a full-stack fitness tracking application using React, Flask, and PostgreSQL.
- Designed secure **RESTful APIs** with JWT authentication and protected routes.
- Built modular React components improving maintainability and responsiveness.
- Implemented role-based access control and optimized backend performance.
- Performed API testing and debugging using Postman and Git workflows.

Smart India Hackathon (SIH) – Participant

2025

National-Level Hackathon

- Collaborated in a team-based national innovation challenge to design and prototype solutions addressing real-world problem statements.
- Contributed to system architecture design, feature implementation, and rapid prototyping under strict time constraints.
- Applied problem-solving, teamwork, and structured development methodologies to deliver a functional prototype.

PROJECTS

Career Copilot

React, TypeScript, Vite

- Engineered a full-stack AI-powered career guidance platform enabling users to generate personalized career roadmaps and resumes.
- Designed secure authentication and protected routing using Context API and role-based access control.
- Architected modular React components and implemented dynamic skill visualization dashboards to enhance user engagement.

Health Tracking Website (TrackWell)

- Developed a responsive health monitoring web application integrating interactive UI components and simulated backend processing.
- Implemented symptom analysis logic and recommendation workflows to provide structured health insights.

Face Tilt Detection System

- Designed a real-time computer vision system using OpenCV and Python to detect facial orientation through eye-position analysis.
- Applied Haar Cascade classifiers and numerical processing techniques to improve detection accuracy.
- Structured the system for low-latency performance suitable for live webcam input environments.

Tourism Management System

JavaScript, HTML, CSS

- Developed a dynamic tourism management web application enabling users to explore destinations, view travel packages, and manage bookings.
- Implemented interactive features using JavaScript including form validation, dynamic content rendering, and user input handling.
- Designed a responsive UI ensuring seamless performance across devices with structured front-end architecture.
- Enhanced user experience by integrating filtering options, package categorization, and smooth navigation workflows.

SKILLS

Programming Languages: C, C++, Python, TypeScript

Frontend Technologies: React.js, HTML, CSS, Responsive Design

Backend Technologies: Flask, Node.js, Express.js, REST APIs, JWT

Database: PostgreSQL

Tools & Platforms: Git, GitHub, Postman, VS Code

Core Concepts: Data Structures, DBMS, OOP
